ERP Considerations for Midsize Businesses

http://www.groundreport.com/Media_and_Tech/ERP-Con...

by Piyas Roy

Regardless of language, culture and industry, the business needs, goals and challenges of midsize organizations are remarkably similar.

Every day midsize companies strive for a solid financial foundation, high customer satisfaction and positive business growth. It doesn't matter if the company is focused on a local market or competing across oceans – the fundamental components of midsize business

success are universal.

Linking Strategy to Execution with SAP Solutions for Enterprise Performance Management

by Sanjay J. Poonen, Business Objects, an SAP company

Profitability, shareholder value, regulatory compliance: These are the dimensions of a business environment that executives must consider on a daily basis. And while every business is different, no matter the industry, each environment is fluid — comprised of a continual adjustment of plans and strategic priorities based on financial and operational changes. Managing this fluidity requires tools to monitor the business environment, analyze diverse data streams, and assess levels of risk.

Towards a Unified Business: Integration Technology Anchors

http://www.imnunlocked.com/erp/sappart_citi/Data_I...

Information is now the life-stem of the business world. The top management always requires a variety of real-time data to make high-level decisions. The success of an enterprise depends predominantly on the strength of its strategic decision support system (DSS). These decisions ultimately lead towards the successful implementation of its business processes. It is evident that only a good strategic management can take the enterprise towards its vision. The modern business now urges for a high-end integration solution, to meet their changing business needs and to support the DSS by bringing the unified and consolidated business information at their end. To allow data travel, the DSS must use an integration solution. A number of integration solutions are available in the market; all promising a flourishing business but one needs to check for one's specific customized needs - compliant solution.
