## CitiXsys Newsletter

March 2008

Greetings!

It gives me great pleasure to connect with you again. At CitiXsys, our partners and customers are key to success; and we believe keeping you well informed of changes and updates is instrumental in executing critical business decisions.

The Product Webinar Series has been a tremendous success and I would like to thank all those who have attended these webinars for their valuable feedback and recommendations. In this spirit, we are back with the webinar series for the month of April and I encourage you to attend a session - to find out what's new, what to expect out of our products as well as future releases.

With regards to our Partner Program, I am pleased to share with you the good news that CitiXsys has successfully formed alliances with several new partners across the globe - and the number is steadily increasing. In closing, I wish our new Partners a warm welcome and encourage you all to visit our Partner Portal and utilize the resources available to you.

Happy Reading!

Best Wishes,  
Kamal Karmakar  
CEO,

## PRODUCT NEWS

## Part 2: Special Feature on Warehouse Management Solution from CitiXsys

The Warehouse Management System (WMS) encompasses the day-to-day transactions that run a warehouse with fully integrated data collection technologies, such as bar code scanning, bar code printing, and wireless mobile data collection. This warehouse system includes picking, packing, put away, shipping, receiving, inventory analysis, inventory moves and adjustments, warehouse transfers, inventory counting, inventory tracking, as well as serial and lot tracking. The WMS is implemented with automatic data collection in the form of radio-frequency (RF) portable terminals with bar code scanners. The WMS application can be accessed from a Radio Frequency (RF) hand-held device.

WMS Supports Multiple RF Hardware Platforms Including Symbol Technologies and Zebra. The RF integration with WMS will provide the users to use the RF and do the warehouse activities. The use of RF saves time, eliminates the use of paper and increases the accuracy in performing the warehouse activities. This increases the productivity of warehouse.

There are 4 modules (**receiving, Inventory, order fulfillment and shipping**) mentioned below, which are integrated with the RF and the activities that can be performed using the RF are also mentioned.

The **Receiving module** allows inventory to be received into the warehouse, where it is uniquely identified with a pallet, carton or if desired a product serial/lot number. This information is then used for product location and movement in the other WMS modules. Receiving is done against the existing Purchase Order created from SBO and it validates items received. Another feature of the Receiving module is directed put-away, which guides the movement of the items from the receiving locations to the different locations based on the rules defined. The manual put away can also be done by the user.

The **Inventory module** accurately tracks inventory throughout the entire warehouse. The user can use the RF to inquire about the item, location, pallet and serial/lot numbers. Cycle counting can be done using wireless scanning devices. The information obtained by the scanner is updated to the WMS inventory immediately, reflecting the proper count. The user can create the replenishment and pallets using the RF. The adjustments can also be done using the RF.

The **Order Fulfillment module** utilizes wireless scanners to direct the picking of product. Using the information from the Inventory and Receiving modules, based on the allocation, it allows pickers to select the correct product for each order. All of this is accomplished in a paperless picking environment. The location inventory is updated immediately as the pick takes place.

The **Shipping module** allows RF user to ship the picked/packed sales orders. The shipping labels can also get printed using the RF.

## Mark your calendar, the CitiXsys Product Webinar Schedule for April is out!

Attend an informative and feature rich product webinar this April and learn how a CitiXsys solution can help improve your business processes, increase ROI and effectively enhance your operations. Product demos will be conducted every Wednesday and Friday throughout April.

- ✓ Credit Card Application for SAP Business One
- ✓ iVend Retail - POS and Retail Management Solution
- ✓ Inventory Pro - Efficient Inventory Management Solution
- ✓ Item Matrix - Retail Inventory Tracking Solution

## SAP Business One Implementation Methodology at CitiXsys

CitiXsys closely adheres to the SAP Business One Accelerated Implementation Program developed by SAP to specifically support the implementation of SAP Business One in small and midsize enterprises. The SAP Business One Accelerated Implementation Program structures the SAP Business One implementation process in five phases: Project Preparation, Business Blueprint, Project Realization, Final Preparation, and Go-Live and Support. Each phase contains a detailed set of deliverables, tasks, and responsibilities and clearly defines milestones that have to be completed before moving on to the next project phase. In addition, it includes tools, templates, and best-practice recommendations for the successful completion of each phase.
